PROFILE

Software Developer with a passion for innovative solutions, I thrive on creating exceptional digital experiences that drive business growth and customer satisfaction.

WORK EXPERIENCE

University of Saint Louis Tuguegarao
JUNIOR PROGRAMMER

Tuguegarao City
Jan 2023 - Aug 2026

- Developed and maintained modules for the university's Enterprise Resource Planning – Human Resources Information System (ERP-HRIS), supporting core HR operations and employee records.
- Designed and developed an online leave management module, enabling employees to submit leave requests electronically and improving the efficiency of leave processing.
- Automated the generation of key HR documents and reports, including Daily Time Records (DTR), attendance reports, statistical reports, and employee contracts.
- Developed and enhanced workflows covering the employee lifecycle, including hiring, appointments, personnel records, salary information, rank management, and resignation processing.
- Built employee self-service features that allow staff to submit requirements and maintain their personal and professional information online.
- Maintained existing HRIS functionality by troubleshooting system issues, implementing enhancements, and adapting features to evolving operational requirements.

PROJECTS

Point-of-Sale (POS) System

React • TypeScript • Laravel • MySQL

- Engineered a full-stack Point-of-Sale system for managing products, processing sales transactions, and maintaining transaction records.
- Implemented a streamlined checkout workflow with automatic calculation of transaction totals.
- Developed backend functionality for product management, transaction processing, and sales history using Laravel and MySQL.
- Designed a responsive and intuitive interface to support efficient day-to-day sales operations.

Inventory Management System

React • TypeScript • Laravel • MySQL

- Developed a full-stack inventory management system for organizing products, monitoring stock levels, and maintaining inventory records.
- Implemented automated stock tracking to maintain accurate product quantities as inventory records are updated.
- Built backend functionality for product management, inventory records, and stock monitoring using Laravel and MySQL.
- Created a responsive dashboard for viewing and managing product and inventory information efficiently.

EDUCATION
